

DETACH AND KEEP THIS  
LETTER FOR YOUR  
INFORMATION

Dear Parent or Guardian

### Reception to Year 6 Influenza Nasal Spray Vaccination 2020

The Influenza nasal spray vaccination is offered routinely to all children; in year groups Reception to and including Year 6 in primary schools across East and West Sussex; as part of the national programme for vaccination of children and young people.

Your child will be offered the Influenza vaccine that is given as a simple spray up the nose. It is painless and quick. By having this vaccination your child will protect others at risk from flu and help reduce pressure on the NHS.

#### Please complete the attached form:

- One form for each child
- Use a black pen and CAPITAL LETTERS to answer **all** the questions on the form
- Detach and return the form to the school within 7 days of receipt

If you do not want your child to have this vaccination, please complete and return the consent form indicating this. In the absence of a form, we may contact you to offer other opportunities to consent.

**Should you change your mind after you have returned the consent form, please put this in writing stating student's name, date of birth, school name and the change you wish to make. Give this to the school office marked 'Urgent for the attention of the Immunisation Service'.**

Dates of Immunisation sessions in schools will be available on the Sussex Community NHS Foundation Trust website. If the vaccination is not given on the day, a letter detailing the Immunisation Service catch up clinics will be sent home via the school. Catch up clinic dates can also be found on the Trust website. Your child cannot have this vaccination at the GP surgery unless they have a medical condition.

#### If your child has asthma, please ensure you read the section below.

If your child's asthma has worsened that:

- **Up to 14 days before vaccination they have required oral steroids or increased inhaled steroids**
- **Up to 3 days before vaccination your child has become wheezy**

Please inform the Immunisation Service **by letter**, including your child's name, date of birth, address and give it to the school office before 9am on the morning of the vaccination session.

Vaccination will be deferred in the above cases.

Yours sincerely

## Influenza Nasal Spray Vaccination FAQ's

### ***What vaccine is being offered and why?***

The Fluenz Tetra nasal spray is the vaccine currently used for the children's routine Influenza vaccination programme. It offers protection against four strains of the Influenza virus which are anticipated to be circulating in the UK this winter. The virus in the vaccine is live, but it has been weakened so that it cannot cause the illness in healthy people. It can reduce the circulation of Influenza and can protect the wider community, particularly those for whom Influenza poses a serious health risk.

For the Patient Information Leaflet and further information visit: <https://www.medicines.org.uk/emc/product/3296/pil>

### ***What is Influenza?***

Influenza is an unpleasant illness causing fever, stuffy nose, dry cough, sore throat, aching muscles and joints, and extreme tiredness. This can last several days and may need hospital treatment. Serious complications include a painful ear infection, bronchitis, and pneumonia. The Influenza season in the UK is from Autumn through to Spring.

### ***Safety***

The vaccine has undergone rigorous safety testing before being licensed for use in the UK. It is a well established vaccine with a good safety profile, and like all other vaccines unwanted reactions are constantly monitored.

### ***Shedding. What do I need to know?***

The amount of virus shed after vaccination is normally below the levels needed to pass on the infection to others and it does not survive for long outside of the body. Unvaccinated children are not at risk of catching flu from the vaccine either through being in the same room where flu vaccine has been given or by being in individual contact with recently vaccinated children. This is in contrast to natural flu infection, which spreads easily during the flu season.

There is a very small percentage of children who are extremely immunocompromised (for example following a bone marrow transplant). These children are normally advised not to attend school due to the much higher risk of being in contact with other infections, including seasonal Influenza.

Children who have been vaccinated with the nasal spray should avoid household contact with people with very severely weakened immune systems for around two weeks following vaccination (for example those who are receiving chemotherapy).

### ***Are there any side effects of the vaccine?***

Children may develop a runny or blocked nose, headache, tiredness and reduced appetite, lasting a few days. The vaccine is absorbed quickly so, even if your child sneezes immediately after having had it, there's no need to worry that it hasn't worked. Any other side effects are unusual. If you're worried about any reaction you can call the NHS 111 service.

### ***Children should not have the nasal vaccine if they:***

- Are currently wheezy or have been wheezy in the past three days (vaccination should be delayed until at least three days after the wheezing has stopped).
- Are severely asthmatic, i.e. being treated with oral steroids or high dose inhaled steroids.
- Have a condition that severely weakens their immune system or have someone in their household who needs isolation.
- Have had severe anaphylaxis to egg allergy requiring intensive care treatment.
- Severe anaphylaxis to any other components of the vaccine – check the Patient Information Leaflet.

### ***My child had the Influenza vaccination last year. Do they need another one this year?***

Yes; the Influenza vaccine for each season has the current four strains of Influenza, these may be different from last year. The World Health Organisation recommends annual vaccination.

### ***Does the nasal vaccine contain gelatine derived from pigs (porcine gelatine)?***

Yes, the vaccine does contain a highly processed form of porcine gelatine, to keep it stable and effective. There is no porcine free alternative available for children in the non 'at risk categories'.

The World Health Organisation and the Islamic Organisation for Medical Sciences advised gelatine derived from impure animals for use in medicines has been sufficiently transformed so as to make its consumption permissible.

### ***What if my child only has the vaccine in one nostril?***

A spray in each nostril is to maximize contact with the cells in the nose. A single spray does induce a sufficient immune response to protect your child.

### ***What does consenting to SCFT staff to be able to view my child's Digital Health Record mean?***

It enables any SCFT Children's Services staff, who provide care for your child, to see information which has been shared out from the GP and other health organisations records if they use compatible systems. We cannot view other organisations records without consent, except in exceptional circumstances. Access to your child's health record helps our services to make safe clinical decisions on the most appropriate treatment and care.
